

BusinessObjects Enterprise XI: Administering Users and Content with the CMC

SA210R2

Course Description

This two-day instructor-led course explains how to perform the tasks in the central management console (CMC). These tasks involve supporting BusinessObjects™ Enterprise users and groups so they can access corporate data through the web portal in BusinessObjects Enterprise. This corporate data can take the form of Crystal Reports®, BusinessObjects Web Intelligence™, or Desktop Intelligence™ documents, OLAP Intelligence™ reports, program objects, object packages, and popular third-party objects, such as Microsoft Word and Excel files, among others. Please note, this course does not discuss maintaining BusinessObjects Enterprise servers, which is taught in the BusinessObjects Enterprise XI R1/R2: Administering Servers – Windows course.

The business benefit of this course is that it provides a foundation for system architects/administrators to effectively manage both users and content on the BusinessObjects Enterprise platform.

Who should attend?

Crystal Reports Server, BusinessObjects Edge Series, BusinessObjects XI Release 1 and 2 users may attend this course. BusinessObjects XI Release 1 users will notice some sections throughout the course that do not apply to their deployments, as a result of new BusinessObjects XI Release 2 functionality. In particular:

- Desktop Intelligence documents as a new object type
- The addition of Desktop Intelligence servers to the platform
- New default applications appearing in the CMC
- Publications as a new object type to support multi-pass report bursting for Desktop Intelligence documents
- Profiles as a new method to secure and distribute Desktop Intelligence documents using Publications

The target audience for this course is system architects/administrators who are new to BusinessObjects Enterprise and will be responsible for maintaining BusinessObjects Enterprise users, groups, and objects in their organization.
